U.S. Patent and Trademark Office PTO-326 (Rev. 04-01)

1) Notice of References Cited (PTO-892)

2) Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) Information Disclosure Statement(s) (PTO-1449) Paper No(s) 5.

Interview Summary (PTO-413) Paper No(s).

Notice of Informal Patent Application (PTO-152)

Application/Control Number: 09/720,520

Art Unit: 2834

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Sheet-Layered Lamination Stack Slotted Rotor For Electric Motor.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 4. The term "a geometric shape" in claims 1 & 6 is a relative term which renders the claim indefinite. The term "a geometric shape" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. The actual "geometric shape" of the laminations must be properly described or specified in the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 09/720,520

Art Unit: 2834

6. Claims 1 & 6 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 3,662,200 to Rank et al.

Rank et al. clearly teaches the construction of an electric motor (10) including a stator (26) and a rotor (12) which defines a rotor axis and includes at least a stack of laminations layered by sheets (58, 60) and provided with slots (34) for receiving rotor windings, wherein at an end face of the at least one stack of laminations, there is provided at least one rotor end sheet (58 or 60) which is made of high-strength fine-grain structural steel and exhibits, at least in proximity of the rotor axis, a geometric shape of the sheets layered in the stack of laminations.

7. With regards to claim 6, Rank et al. also discloses an electric motor (10), comprising: a stator (26); and

a rotor (12) defined by a rotor axis and having a stack (30) of laminations which is layered by sheets (58, 60), said stack of laminations having opposite end faces, and two rotor end sheets, one of the rotor end sheets (58) provided on one of the end faces of the stack of laminations, and the other one of the rotor end sheets (60) provided on the other one of the end faces of the stack of laminations, each of said rotor end sheets being made of high-strength fine-grain structural steel and exhibiting, at least in proximity of the rotor axis, a geometric shape of the sheets layered in the stack of laminations.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

⁽a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/720,520

Art Unit: 2834

9. Claims 2, 3, 7 & 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 3,662,200 to Rank et al. in view of U.S. Patent No. 3,590,208 to Martini et al.

Rank et al. discloses an electric motor (10) as described above.

However, it fails to disclose an electric motor, wherein:

the rotor end sheet is provided with slots for receiving the rotor windings, said slots of the rotor end sheet being closed, or at least some of the slots of the rotor end sheet having leakage orifices.

Martini et al. teaches an electric motor, wherein:

the slots for receiving the rotor windings, are closed (Figure 2), or at least some of the slots have leakage orifices (Figure 4) for the purpose of finding a method, which will adapt the projection welding process to the manufacture of a stack of laminations with inclined slots.

It would have been obvious to one skilled in the art at the time the invention was made to use the open or closed slot configuration disclosed by Martini et al. on the rotor end sheets disclosed by Rank et al. for the purpose of finding a method, which will adapt the projection welding process to the manufacture of a stack of laminations with inclined slots.

10. Claims 4,5 & 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 3,662,200 to Rank et al. in view of U.S. Patent No. 3,590,208 to Martini et al. as applied to claims 2, 3, 7 & 8 above, and further in view of common knowledge in the art.

Rank et al. in view of Martini et al. discloses the claimed invention except for the electric motor (10) being a high-speed, heavy-duty asynchronous motor. It would have been an obvious matter of design choice to select the appropriate materials to make the electric motor (10) a high-

Art Unit: 2834

speed capable, heavy-duty classified asynchronous motor since the applicant has not disclosed that motor speed capability and heavy-duty classification solves any stated problem or is for any particular purpose and it appears that the invention would perform equally well without these two material determined characteristics.

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pedro J. Cuevas whose telephone number is (703) 308-4904. The examiner can normally be reached on M-F from 8:30 - 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Néstor R. Ramírez can be reached on (703) 308-1371. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 305-1341 for regular communications and (703) 305-3432 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
